Datasym Pos Inc. Launches the EliXR

Brantford ON, June 25 2010 - Datasym POS Inc. launches the EliXR, a Linux based POS system. The EliXR is a sleek and sophisticated rapid deployment terminal providing the customer with advanced technology and the option for customization.

The EliXR is an embedded PC based system developed specifically for POS applications where modular design and processing speed is a requirement. It is also compatible with a variety of peripheral interfaces and it is compatible with Comm2000 software. The EliXR is a piece by piece terminal, as opposed to an all in one station, which allows for hardware customization.

“Simplicity, security and sophistication were key elements involved with development of the EliXR”, quoted president of Datasym POS Inc. Robert Field. “It is a user friendly terminal, with advanced capabilities. The Linux based system is compatible with all Datasym software, it allows for the customer to replace older Datasym terminals while maintaining the same back end systems internally. The benefit is a store can gradually change over their system without the financial burden. While the EliXR has the option for advancement it can still interface with an older system.” Rob said.

The EliXR combines a variety of advanced performance features including; embedded hardware, compatibility with high speed thermal printers as well as compatibility with industry standard VGA Displays and three choices for a fully configurable POS Keyboards.

Datasym POS Inc. is a leading edge Point of Sales company based in Brantford, ON. Canada with distribution facilities in Niagara Falls, NY, USA. Datasym develops hardware and software solutions for small to large companies across a multitude of industries.
