Datasym Receives PA-DSS certification from PCI Security Standards Council

Datasym is proud to announce it has officially received PA-DSS certification on the General Retail software and DatasymPro software using either Symfinite from Datasym or any of Datacap's Tran products as middleware to communicate with the payment networks.

Datasym's General Retail software is used in the SC6000 cash register terminal as well as the modular Merlin terminal which are used in many retail establishments. Both of these terminals were designed earlier by Datasym.

Datasym's DatasymPro software is used in the XR650 hybrid POS terminal which is a newer generation of retail product that combines some of the power of a computer with the security and stability of an electronic cash register. The DatasymPro software is to be used in the next line of hardware product released by Datasym as well since it was written to be easily ported to other systems.

There are very few cash register type terminals that have gone after the PA-DSS certification because the specifications to be met are very much written towards higher costing Windows based PC systems. This made the task a bit more daunting and required a couple minor adjustments in the code but in the end Datasym was successful in gaining the certification.

About Datacap

Datacap Systems has successfully designed, manufactured and marketed integrated payment verification systems for over 25 years. Datacap's payment interfaces allow terminals to get easy access to electronic payment processing networks for card authorization.

About Datasym

Datasym Inc. is a leading edge Point of Sale Company based in Brantford, ON. Canada which has been developing software and hardware solutions for small to large retail companies over for 25 years.
