### **Decrementing Inventory Now Available for Datasym's XR650 POS Terminal**

Datasym announced today that *Decrementing Inventory* is now available on Version 1.1 of the XR650 POS System. The environmentally friendly XR650 is a cost effective POS system that provides the powerful, flexible functionality of a PC system without the threat of virus attacks or system crashes.

The Decrementing Inventory feature allows retailers to track a count of any or all items directly from the XR650 POS system. They can set stock, receive and manage waste, all from one terminal. The owner can set minimum requirements for certain items, i.e. cigarettes which will allow him to track when he needs to reorder and how the item is moving.

Straightforward, minimum stock reports indicate when an item is below the minimum quantity and needs to be reordered. The reports are available individually per terminal or consolidated from all terminals.

"This new feature is perfect for small businesses that do not require complex inventory packages and have limited budgets available," remarked Director of Sales/Marketing, Bev Gorski "In these economic times it is important to offer affordable, practical solutions."
