### **Datasym Enhances XR650 (1.1) with Employee Time Keeping**

Datasym announced today the XR650 (1.1) POS system has been enhanced with an Employee Time Keeping feature. The environmentally friendly XR650 is a cost effective POS system that provides the powerful, flexible functionality of a PC system, without the threat of virus attacks or system crashes.

The Employee Time Keeping feature provides the retailer with an alternative to expensive time keeping systems. Employees can clock in and out, right at the terminal; adjustments can also be carried out if necessary. The XR650 will capture each clock in/out and will deliver a report showing the activity for each employee. The information gathered from this report could then be entered into a payroll system if desired.

In previous versions of Datasym terminals, clocking in & out was achieved through an interface to 3<sup>rd</sup> party software. President, Rick Sterne said "We are thrilled to offer this Employee Time Keeping Feature to the marketplace, it is easy to implement, and retailers will have a time keeping system up and running in no time!"
